

EXPERIMENT No. 6

Aim: To study agile methodology and test case management using the JIRA tool. To create a scrum board for scrum master using the JIRA tool.

Theory:

Jira is a software development tool that helps teams plan, track, and release software projects. It's a popular tool among software development teams.

JIRA is a widely used issue tracking and project management software developed by Atlassian. The theory behind JIRA revolves around several key principles and concepts:

Issue Tracking:

At its core, JIRA is designed to help teams track tasks, bugs, features, and other issues within a project. It provides a centralized platform for capturing, organizing, and prioritizing these items.

Agile Methodologies:

JIRA supports agile methodologies such as Scrum and Kanban, enabling teams to plan, track, and deliver work in iterative cycles.

Agile principles emphasize collaboration, adaptability, and delivering value to customers.

Workflow Management:

JIRA allows teams to define custom workflows that represent the lifecycle of an issue from creation to completion. Workflows can include various statuses, transitions, and conditions to reflect the specific processes followed by the team.

Customization:

One of the key strengths of JIRA is its flexibility and customization options. Teams can tailor JIRA to their specific needs by creating custom issue types, fields, workflows, and project configurations.

Collaboration and Communication:

JIRA facilitates collaboration among team members by providing features such as commenting, mentioning, and attaching files to issues. It also integrates with other Atlassian products like Confluence and Bitbucket for seamless communication and knowledge sharing.

Reporting and Analytics:

JIRA offers robust reporting and analytics capabilities, allowing teams to gain insights into their project progress, team performance, and other key metrics. Users can create custom dashboards, charts, and reports to monitor and analyze project data.

Integration:

JIRA integrates with a wide range of third-party tools and services, including development tools, CI/CD pipelines, customer support systems, and more. This integration ecosystem enables teams to streamline their workflows and improve productivity.

Scalability and Performance:

JIRA is designed to scale with the needs of growing teams and organizations. It can handle large volumes of data and users while maintaining performance and reliability.

The Jira homepage features a clean, modern design with a white background and blue accents. At the top, there's a navigation bar with links for Features, Solutions, Product guide, Templates, and Pricing. A 'Get it free' button and a search icon are also present. The main heading 'Great outcomes start with Jira' is prominently displayed, followed by a subheading 'The only project management tool you need to plan and track work across every team.' Below this, there's a 'Sign up' button and a 'Continue with' section with Google and Microsoft logos. The central part of the page is divided into five columns, each representing a different use case: Software Development, Marketing, IT, Design, and Operations. Each column contains a small thumbnail image and a brief description of how Jira can be used in that context. For example, the Software Development column shows a mobile app development workflow, while the Marketing column shows a campaign launch timeline.

The 'Welcome!' dialog box is a white rectangular window with a blue border. It contains the following elements: a 'Name your project' section with a text input field containing 'MyScrumProject'; a 'How familiar are you with Jira?' section with three radio buttons: 'Not familiar' (selected), 'Somewhat', and 'Familiar'; and a 'Get started' button at the bottom right. The background shows the Jira interface with a sidebar on the left and a main content area on the right. The sidebar has a 'My Scrum Project' section with a 'Backlog' tab selected. The main content area shows a 'Backlog' view with a search bar and a list of issues.

The 'Added people to project' dialog box is a white rectangular window with a blue border. It contains the following elements: a title 'Added people to project'; a message 'You have added 1 person to your project and 1 new license has been added to Jira.'; a list of added users with a 'New to Jira' label; a 'Project settings' button; and an 'OK' button. The background shows the Jira interface with a sidebar on the left and a main content area on the right. The sidebar has a 'My Scrum Project' section with a 'Backlog' tab selected. The main content area shows a 'Backlog' view with a search bar and a list of issues.

This screenshot shows the Jira interface for a project named 'MyScrumProject'. The left sidebar contains navigation links for 'Summary', 'Timeline', 'Backlog' (which is selected), 'Board', 'Forms', 'Goals', 'Code', 'Project pages', and 'Archived issues'. The main content area is titled 'Backlog' and shows a search bar, a filter for 'Epic', and a 'Start sprint' button. Below this, there is a section for 'SCRUM Sprint 1' with a 'TO DO' filter and a 'Create issue' button. A 'Backlog' section shows '0 issues' and a 'Create sprint' button. The right sidebar features a 'Your 30-day Premium trial' banner and a list of tasks: 'Create a project', 'Create an issue', 'Start with the basics', 'Invite your teammates', 'Connect your tools', 'Get the mobile app', 'Find help', 'Discover what else is included', and 'Explore Premium features'. A 'Dismiss Quickstart' button is at the bottom of the sidebar.

This screenshot shows the Jira interface for 'MyScrumProject' with the 'Issues without epic' filter applied. The left sidebar is identical to the first screenshot. The main content area shows the 'Backlog' with a search bar and a filter for 'Epic'. The 'SCRUM Sprint 1' section now shows '1 issue' and a 'Create issue' button. The 'Backlog' section shows '0 issues' and a 'Create sprint' button. The right sidebar is identical to the first screenshot, showing the 'Your 30-day Premium trial' banner and the list of tasks.

Conclusion: Thus, we have successfully studied agile methodology and test case management using JIRA tool and create scrum board for scrum master using JIRA tool.
